

Performance Report of the Varsity Girls Basketball Program 2025

A comprehensive statistical analysis of 10 games from the 2025 season

By: Lucas Andrade

Presentation Overview

01

Team Performance Analysis

Comprehensive review of overall team statistics, and key performance trends across the season

02

Optimal Lineup Configurations

Data-driven identification of the most effective player combinations and rotation strategies

03

Most Improved Player Recognition

Statistical tracking of individual player growth and development throughout the season

04

Most Valuable Player Assessment

Evaluation of the athlete who demonstrated the greatest impact on team success

By: Lucas Andrade

Objectives & Methodology

Research Objectives

This analysis aims to provide actionable insights into team performance, identify strategic opportunities for improvement, and recognize outstanding individual contributions. By examining comprehensive game statistics, we seek to optimize lineup decisions and enhance competitive outcomes for future seasons.

The evaluation covers offensive efficiency, defensive effectiveness, player synergy, and critical in-game situations.

By: Lucas Andrade

Analytical Approach

Data was systematically collected from all 10 games during the 2024-2025 season, utilizing advanced statistical tracking methods. Our methodology combines quantitative metrics with qualitative game observations to ensure comprehensive assessment.

Analysis includes comparative performance reviews, trend identification, and correlation studies between different performance variables.

Key Metrics & Performance Indicators

Offensive Metrics

- Points per game
- Field goal percentage
- Assists-to-turnover ratio
- True shooting percentage
- Points per possession
- Pace
- Offensive rating
- Net rating

Defensive Metrics

- Rebounds (total and average)
- Steals
- Defensive rating

Individual Metrics

- Player efficiency rating
- Plus/minus statistics
- Offensive rating
- Impact on winning

By: Lucas Andrade

Team Performance Analysis

This section presents comprehensive team statistics gathered across the 10-game season. The dashboard below illustrates offensive and defensive trends, scoring patterns, and overall competitive performance.

To generate the overall team performance report, averages of several indicators were obtained for all opponents and for the studied team

Teams were scored according to their rankings in each indicator. The best team in an indicator received score 1

Scores were summed and the overall team ranking was determined by this sum. The best team had the lowest total score for being better ranked across most indicators

The best performances were from **Graded** and **Chapel**, which stood out in PPG, TO/POSS, REB, and OFFRTG.

Among the 10 teams analyzed, considering that EAB data are the average of its 10 games played, the school ranked second to last in the sum of indicator rankings, with especially poor performance in TO/POSS, OFFRTG, and DEFRTG. This may indicate that the high number of errors affected both the team’s offensive and defensive performance

Team Performance Analysis

This section presents comprehensive team statistics gathered across the 10-game season. The dashboard below illustrates offensive and defensive trends, scoring patterns, and overall competitive performance.

In comparison by defense faced, the team performed better overall against man-to-man defense, while against the 2-3 zone the team showed performance above the general average, only lagging in offensive rebounds.

📌 Data against man-to-man defense may indicate the team performs better when playing at a faster pace, having achieved a higher average of points in those games (**20.5**), with better field goal efficiency (**25%**). For comparison, the average PACE was **76.72**, 10 points higher than the expected average possessions for the under-17 female basketball teams.

Optimal Lineup Configurations

Varsity Girls Basketball 2025 Lineup report

By: Lucas Andrade

PPG
16.9

REB
26.1

PTS/POSS
1.36

After testing several formations, both used and unused during the season, the most outstanding lineup was the third lineup composed of: **Isadora, Jasmin, Laura, Manuela Lacerda, and Rosa**. This lineup achieved a strong overall average across metrics, with a special highlight for an average of **1.36 PTS/POSS**, showing good offensive performance

The second place in the test was shared between two formations:

- **Lineup 2:** Beatriz, Isadora, Jasmin, Laura, and Manuela Lacerda; notable for high PPG production (**18.5**) but with a high average of turnovers per game (**34.8**)
- **Lineup 6:** Jasmin, Laura, Manuela, Rosa, and Tess; had the lowest total turnovers, which may be explained by Tess having limited minutes and, like Rosa, not having many offensive touches during games

By: Lucas Andrade

Most Improved Player Recognition

All these indicators were calculated by comparing the player’s first-game data with their season average. The final score was obtained by summing the results of all these indicators. Players were ranked from highest summed score to lowest

Based on the calculated metrics and indicators, the athlete who demonstrated the greatest statistical growth was **Manuela Lacerda**, with a balanced increase across many analyzed metrics

She had an increase of 1 PPG between her first game and her season average, 3 rebounds per game, 7.50 points of efficiency, and 2.40 points in +/- . Her total summed improvement across the analyzed categories was **14.37** points

- 📌 Notable athletes who came close in the analysis:
- **Isadora Carvalho**: increase of **+7.13** in +/- and **+5.38** in efficiency, resulting in a summed score of **13.68**, finishing second
 - **Laura Bonadio**: third place with a summed score of **12.33**, highlighted by an increase of **+3.89 PPG**

Most Valuable Player Assessment

Excellence in Performance

The Most Valuable Player consistently demonstrated exceptional leadership, statistical excellence, and game-changing impact throughout the season. Based on the calculated metrics and indicators, the athlete with the best overall performance in the season was **Jasmin Santos** with a total classification score of **13**, followed by **Laura Bonadio** with **17**

Jasmin stood out for the consistency of her statistics, and for achieving an average of **19** points of efficiency and **0.45** ORTG, demonstrating her importance to the team

Laura stood out for averaging **5.9 PPG**, with a **36% TS%**, and **9.2 REB** per game, being one of the team's pillars

Key Insights & Recommendations

Strategic Findings

Data analysis reveals a need to focus on pace, maximize fast-breaks, prioritize layups, and better defensive rotations.

Training Focus

The team should focus more on ballhandling, decision making under pressure, passing, finishing around the rim, mid range shooting, and defensive positioning.

Future Success

This team has the traits of a fast-paced, 5-out offense team, with the possibility for a no middle, switch screens, half court man-to-man pressure defense.
